

Important Note: Mass emissions of air toxics, as represented below, should not be used to make conclusions about a facility's impacts on an individual's health. Effects on an individual's health depends upon a number of factors, including the concentration of toxics in the air, the potency (toxicity) of the chemical, and the length of exposure. In addition to the mass emissions of air toxics represented below, the concentration of toxics in the air at a specific location is also dependent on other factors such as, but not limited to, how the pollutant is emitted (stack height and direction, exit velocity and temperature of emissions), wind direction and speed, and distance to the receptor location.

The District is currently implementing a multi-year process under AB 2588 (Air Toxics "Hot Spots" Information and Assessment Act) to update this information and determine each facility's air toxics information and potential impact on the community, including performing complex dispersion modeling and health risk assessment of those facilities with the potential to create a health risk. The final phase of this process will be initiated in 2020. Updated air toxics information will be added to the District's AB 617 website as available: <http://community.valleyair.org/>

The information presented below addresses facility emissions only; however, a community may also be impacted by other types of sources such as mobile sources and dispersed areawide sources. These will be addressed in future enhancements to information available on the District's AB 617 website: <http://community.valleyair.org/>

## District Permitted Facilities Within Stockton Boundary

### Air Toxic Emissions (pounds/year)

DISTRICT REGION	DISTRICT ID	FACILITY NAME	FACILITY DESCRIPTION	ACTIVE PERMITS COUNT	POLLUTANT	2018
