

Draft CIP Approval Notice for San Joaquin Fresno Truck Study

Air District: San Joaquin Valley Air Pollution Control District

Community: South Central Fresno

Community Emissions Reduction Program (CERP) Measure:

HD.11: HEAVY DUTY TRUCK REROUTING

Project Type: Educational Study

Project Plan Completion Date: July 21, 2020

CARB Action (Date): Approved; August 19, 2020

Project Description: This measure will study whether heavy-duty trucks travelling within the community can be rerouted to reduce emissions exposure of South Central Fresno community residents. The study will focus on the analysis of existing and future planned routes as defined on the September 25, 2005, City of Fresno Designated Truck Route Map in the boundary area defined by Assembly Bill 617. The study will also analyze potential changes to the designated routes, including eliminating existing routes and proposed new routes, as identified in the Southwest Specific Plan and during the community engagement process.

Project Benefits: No direct emission reduction or exposure reduction benefits are associated with this measure. However, the project may enable future exposure reductions, depending on the results of the study and subsequent actions by responsible entities.
