Enforcement Plan Facility Inspections

Facilities that have permits with the Valley Air District are inspected on a regular basis by District Compliance staff to ensure all permit requirements are being followed. New and modified equipment is also inspected before commencing operation. District inspection staff also observes stack emission testing (known as source testing) for certain types of equipment to ensure that proper testing procedures and protocols are followed by the third-party testing company. They also conduct inspections when unforeseen equipment breakdowns occur which may affect a facility's ability to comply with all permit requirements.

In addition to the numerous inspections already conducted by the District each year at permitted facilities throughout the valley, the District committed in the South Central Fresno CERP to increase the frequency of periodic compliance inspections to once every six months at facilities that have had an emissions related violation within the last three years. The following is a listing of all District inspection activities at permitted facilities within the South Central Fresno Community from May 2019 through July 2020. A previous listing of inspections can be found in [Appendix F](#) of the South Central Fresno CERP.

Summary of Complaints

District inspectors respond to approximately 3,000 public air pollution complaints District-wide each year. Some complaints are related to permitted facilities, however a majority of complaints received by the District are for other sources of pollution such as illegal open burning, fireplace burning, dust generating activities, and miscellaneous odors. The District responds to all public complaints received, and makes every effort to respond as quickly as possible. Most complaints are investigated the same day they are reported. The following is a summary of all public air pollution complaints received and responded to within the South Central Fresno Community from May 2019 through July 2020. A previous report of complaints can be found in [Appendix F](#) of the South Central Fresno CERP.

Buildings and trees and landscaping have been razed, the dirt has been pulverized in order to lay sections of track, and the project stopped. So, we have a huge patch of talcum powder like dirt that gets airborne at the slightest breeze. We are suffering from watering eyes, aching lungs, and sinus infections and inflammation. This dirt needs to be covered over, watered, oiled, or planted upon. It is an absolute health hazard, with particulate irritants and Valley Fever mold spores contained in the airborne dust. Enforcement Plan

Summary of Violations Found

The District implements a robust enforcement program that includes regular inspections of facilities with District permits as well as other potential sources of air contaminants. In the South Central Fresno CERP, the District committed to further enhancing its enforcement efforts in a few areas of concern to the community. Over the first year of implementation, District compliance staff have completed numerous hours of additional surveillance in the South Central Fresno Community for open burning violations, fireplace violations, and idling diesel truck violations, in addition to conducting more frequent inspections at facilities with recent emissions violations and dust generating sites.

When a violation of a District rule or other air pollution regulation is discovered during an inspection, complaint investigation, or through surveillance activities, the violation is documented through the issuance of a formal notice to the owner or operator, and depending on the nature of the violation, may be subject to substantial monetary penalties. The following is a summary of all violation notices issued from May 2019 to July 2020 for violations of District Rules or other State air pollution control regulations within the South Central Fresno Community. These include violations at permitted facilities as well as other non-permitted facilities and private residences. A previous list of violations can be found in [Appendix F](#) of the South Central Fresno CERP.
